Luso-German citizen (EU)

RESEARCH SUMMARY

Fourth-year PhD candidate at IA/CAUP (Porto) developing **machine-learning methods for Galactic archaeology**. My **first-author A&A** paper (2025) applied manifold learning (UMAP, HDBSCAN) to disentangle thin/thick-disk, halo, and accreted populations in chrono-chemo-kinematic space, and is the **cited prototype** for the ML tool to be released by FCT Exploratory Project **ArqueoGal (2024.15303.PEX)**, on which I am Co-Investigator with substantial allocations on two scientific tasks. Member of the **ESA Ariel Science Consortium** (Stellar Characterisation WG) and **TESS/Kepler** (TASOC/KASOC). Natural synergies with **Gaia**, **PLATO**, and **Ariel**, and ESA data-science initiatives.

EDUCATION

PhD in Astronomy — University of Porto (FCUP) & IA/CAUP 2022 – 2027 (expected)

Thesis: “Machine Learning Applied to Galactic Archaeology”. Advisors: Tiago L. Campante, Diego Bossini. FCT Doctoral Fellowship 2025.01843.BD (Sep 2025 – Sep 2026).

MSc in Astronomy & Astrophysics — University of Porto (FCUP) · 16/20 2020 – 2022

Thesis: “Determination of Age and Mass for Seismic Stars in the Ariel Input Catalog”. Best Master’s Student in Astronomy & Astrophysics, FCUP (2023).

BSc in Physics — University of Porto (FCUP) 2017 – 2020

RESEARCH POSITIONS

Visiting PhD Student / Associate — INAF Osservatorio di Astrofisica e Scienza dello Spazio, Bologna 2025 – 2026

- Six-month secondment with A. Miglio to develop simulation pipelines for the proposed HAYDN mission; built Python dashboards for noise estimation and synthetic stellar catalogue generation (TRILEGAL, King-profile spatial sampling) across globular and open clusters (47 Tuc, M67, Omega Cen, h+χ Per).
- Team member on FCT HPCvLAB project 2025.00007 on **Deucalion** (Portugal’s EuroHPC petascale supercomputer, TOP500 #219); ran HAYDN Noise Estimator workloads on the ARM A64FX (500k core-hours allocated) and x86 (100k core-hours) partitions. Additional use of the **Matrix HPC and BladeRunner data-analysis clusters** (UniBo / INAF-OAS Bologna Open Physics Hub, SLURM-scheduled).

PhD Researcher — IA/CAUP, Stellar Astrophysics Group, Porto 2022 – present

- **Co-Investigator** on FCT Exploratory Project **ArqueoGal (2024.15303.PEX, 2026–2027)**, PI: T. L. Campante. €60k, 16% success-rate call. Named participant with substantial allocations on Task 5 (Stellar Population Classification, 4.4 PM) and Task 6 (Galactic Modeling, 6 PM); my first-author A&A 2025 paper is the cited prototype for the ML tool to be released on GitHub (deliverable D5.1).
- **First-author** A&A (2025) applying manifold learning (UMAP + HDBSCAN) to *Gaia* DR3-like synthetic samples from FIRE-2 cosmological simulations; validated the ability to disentangle thin/thick disk, halo, and accreted stellar populations — including populations shaped by radial migration and past accretion events — in the chrono-chemo-kinematic parameter space.
- Developing **contrastive self-supervised learning** (TriGroupEncoder) on *Gaia* XP spectral coefficients for prediction of [M/H] and [α/M] chemical abundances (PyTorch; paper in preparation).
- Built seismic+spectroscopic characterisation pipelines cross-matching *Gaia* DR3, GSP-Spec, *TESS*, *Kepler*/K2, and 2MASS; integrated orbital actions, PARAM Bayesian ages, MWDUST extinction, and bolometric corrections to produce target-star samples for Galactic archaeology.
- Co-author on the first asteroseismic detection of solar-like oscillations in a K5 dwarf (ε Indi A; A&A 2024 letter, L16); **on-site observer** with ESPRESSO at ESO’s VLT, Paranal (May 2024).
- Member of the **ESA Ariel Science Consortium** (Stellar Characterisation WG, Age/Mass/Radius sub-WG) since MSc; co-author on the working group’s homogeneous stellar-parameter paper (Magrini et al. 2022). Also affiliated with *TESS* Asteroseismic Science Operations Centre (TASOC) and *Kepler* (KASOC) — Red-Giant Oscillations WG.
- Supervised 5 BSc/MSc students at IA Summer Programmes (2024, 2025) on “Hands-on Galactic Archaeology and Machine Learning using Synthetic Data”.

MSc Research Fellow (FCT) — IA/CAUP, grant CIAAUP-08/2021-BI-M 2021 – 2022

- Implemented a routine in the Bayesian stellar characterisation code PARAM to compute the small frequency separation from acoustic stellar oscillation modes, improving constraints on red-giant modelling.

PUBLICATIONS

3 peer-reviewed papers in Astronomy & Astrophysics (1 first-author). One first-author paper on ML chemical prediction from Gaia XP spectra, and one first-author paper on the proposed HAYDN mission's noise modelling, are currently in preparation.

GRANTS & AWARDS

Co-Investigator, FCT Exploratory Research Project — ArqueoGal (2024.15303.PEX), PI: T. L. Campante. €60k over 18 months; awarded in a 16 % success-rate call (400 / 2 545). Named participant on Stellar Population Classification (4.4 PM) and Galactic Modeling (6 PM). 2026 – 2027

FCT Doctoral Fellowship (2025.01843.BD) — Fundação para a Ciência e a Tecnologia 2025 – 2026

Best Master's Student in Astronomy & Astrophysics — FCUP, University of Porto 2023

FCT MSc Research Grant (CIAAUP-08/2021-BI-M) — BreakStarS project 2021 – 2022

SELECTED TALKS & CONFERENCES

- **Oral (international)** — "Intelligent Identification of Stellar Populations with Manifold Learning", 11th Iberian Meeting on Asteroseismology, Lluç, Spain (Nov 2024).
- **Oral (international)** — "Identification of Stellar Populations through Latent Space Projection", 8th TESS / 15th Kepler Asteroseismic Science Consortium Workshop, Porto (Jul 2024).
- **Oral (national)** — Portuguese National Astronomy Meetings (ENAA): XXXIII Coimbra 2023; XXXIV Guimarães 2024; XXXV Lisbon 2025. Poster — ENAA XXXII Lisbon 2022, and FÍSICA 2022 Porto on Ariel stellar characterisation.
- **Training** — Porto Summer School on Asteroseismology "From Pixels to Stellar Ages" (Jul 2024); The Milky Way Assembly Tale conference (May 2024).

TEACHING, MENTORING & SERVICE

- **Tutor / Outreach** — Escola de Verão de Física (EVF), FCUP: recurring tutor (2023–2025); physics-demonstrations monitor for visiting school groups (Feb 2023 – present).
- **Organisation** — Local Organising Committee, 8th TESS / 15th Kepler Asteroseismic Workshop (Porto, Jul 2024); Chair, IA Stars Day (2023); LOC member, Stars Day (2022).

TECHNICAL SKILLS

Programming: Python (expert), R, SQL, Bash, LaTeX, Git.

Machine learning: scikit-learn, PyTorch, TensorFlow/Keras; manifold learning (UMAP, t-SNE, PCA), clustering (HDBSCAN, k-means, GMM), deep learning, contrastive self-supervised learning, gradient boosting (XGBoost), Bayesian inference, MCMC.

Astronomy software: astropy, galpy, TOPCAT, ADQL; PARAM, MESA, MWDUST, BCCode/YBC, TRILEGAL; IRAF, DS9.

Spectroscopic & photometric surveys (ESA / NASA missions): Gaia DR3 (astrometry, radial velocities, XP spectra, GSP-Spec), APOGEE, LAMOST, GALAH, 2MASS, TESS, Kepler/K2 (via KASOC/TASOC), ESPRESSO.

HPC & environment: Linux, WSL2, Bash, SLURM/SSH; Deucalion EuroHPC (ARM, x86); UniBo Matrix / BladeRunner; CUDA / NVIDIA GPUs.

Languages: Portuguese (native), English (C2), German (A2), French (A2).
